PROJECTS

Smart bridge

A smart bridge electronic project could involve creating a system that monitors and controls various aspects of a bridge's functionality using electronic components and sensors. This could include monitoring structural health, traffic flow, weather conditions, and more

password-based door lock system

A password-based door lock system typically consists of a keypad or a similar input device where users can enter a pre-set password or code to unlock the door. The system verifies the entered password against a stored list of authorized passwords and unlocks the door if the password is
